

A strong storm system along a boundary moved through southeast Colorado Thursday April 22nd, 2010. This system produced several severe thunderstorms the strongest of which produced multiple tornados. Several of these tornados had multiple vortices. The tornados began at 1308 and the first was on the ground for approximately 10 minutes. Several tornados were formed as this storm continued its path to the northeast. This storm continued through our county warning area and then formed several more tornados as it continued its path through east central Colorado.
